SEED POTATOES

Letters and records from users time and time again prove the extra-ordinary values of Certified Seed. It has been known that in some instances dealers offer so-called "Certified Seed" which is only privately inspected and approved. It, therefore, behooves every grower to positively know the origin and method of inspection of every bushel of seed. It is your only protection.

CULTURE—Potatoes thrive best in a sandy loam that contains plenty of vegetable matter; a clover sod or land that was heavily manured for the previous crop supply ideal conditions. Cut the potatoes, leaving two eyes to each piece, and plant 15 inches apart in three-foot rows, 4 inches deep for early plantings, 6 inches deep for later plantings.

Red Bliss To those who prefer a potato with a pink skin and white flesh, or those who grow for markets where this color is in demand, we recommend Red Bliss. It is one of the very earliest, nearly round, peels without waste and a fine yielder. It is a sure and uniform cropper, a strong grower, is of good size, cooks white and mealy.

Irish Cobblers The best early selling sort. It is the standard white Potato, and is increasing in popularity yearly among the best Potato growers. The tubers are uniformly smooth, round and plump; eyes strong and well developed. The flesh is white and of excellent quality. Also used extensively for mid-season and late plantings.

Katahdin Introduced by the U. S. Dept. of Agriculture, resulting from crossing and selecting from Green Mountains, Rurals and Irish Cobbler stock. The skin is white. Elegant for baking and keeps well over winter.

Green Mountain This is a very reliable late variety. It is increasing in popularity wherever known and, in fact, in many sections it has now superseded all other main crop varieties. It is earlier than most other late sorts. It thrives in all soils, especially on sandy soils, and in all localities, yielding big crops of large, smooth, white skinned tubers of oblong to roundish form, somewhat flattened.

Early Rose Very similar to the Red Bliss except that it is longer and flatter in shape. This variety is a good producer and has a fine flavor.

Rural Russets This is the famous Michigan Russet. The tubers are round to oblong in shape, of good size, with pure white flesh. The skin is russet, the eyes few and shallow.

Blue Victor A late potato from which excellent results are obtained. We must receive your order early for this variety as the supply is very limited.

Sweet Potato Plants They do best on a light, well-drained, sandy loam but can be grown successfully on a wide range of soils. We offer these high grade plants at low prices.
